Names: UIN:
Rayyan Dulvi - 238002756
Jodhvir Singh - 538002450
Chase Sims - 138008003
Vraj Desai- 938001866

GROUP 1
Jodhvir, Vraj

B. Variables
1. Person1_name - string
2. Person2_name - string
3. Person3_name - string
4. Person4_name - string

Each string has the name of the respective person entering it
—----------

1. Person1_birthday - string
2. Person2_birthday - string
3. Person3_birthday - string
4. Person4_birthday - string

Each string has the birthday of the respective person entering it and it's entered in the format and order of Month Date Year

C. Instructions -
1. Ask for the input of the person's name and assign it to a string variable (repeat 4 times) such as "person 1 please input your name" etc
2. Ask for the input of the person's birthday and assign it to a string variable using this specific format: (mm-dd-yyyy) , repeat it four times for four different people.

D. Formatting-

print(name, "|", birthday)
print(name, "|", birthday)
print(name, "|", birthday)
print(name, "|", birthday)

E. Code
```
person1_name = input("What is the first person's full name?: ")
person1_birthday = input("What is the first person's birthday format:(mm-dd-yyyy)")
```

```
person2_name = input("What is the second person's full name?:")
person2_birthday = input("What is the first person's birthday format:(mm-dd-yyyy)")

person3_name = input("What is the first person's full name?:")
person3_birthday = input("What is the first person's birthday format:(mm-dd-yyyy)")

person4_name = input("What is the first person's full name?:")
person4_birthday = input("What is the first person's birthday format:(mm-dd-yyyy)")

print(person1_name, "|", person1_birthday)
print(person2_name, "|", person2_birthday)
print(person3_name, "|", person3_birthday)
print(person4_name, "|", person4_birthday)
```

Output:

```
Chase Sims | 03-21-2008
Vraj | 03-21-1981
Jodhvir Singh | 03-20-2008
Rayyan Dulvi | 11-06-2007
```

GROUP 2
Rayyan, Chase

B. Variables

Variables used
1. person1Name - string
2. person2Name - string
3. person3Name - string
4. person4Name - string

Each string variable numbering from 1-4 and ending with “name” holds the person's name as a string value

—----------

1. person1Bay - string
2. person2Bday - string
3. person3Bday - string
4. person4Bday - string

Each string variable numbering from 1-4 and ending with “Bday” holds the person's Birthday as a string value

C. Instructions -

1. At the start each person will be asked to enter their name through a print statement such as “Person 1, please type in your name: ” input which will be assigned to a string variable, with person 1 going first and continuing till person 4 has submitted their input.
2. Ask for the input of the player’s respective birthdate, submitted in the string variable format of Month Date Year, using an input that prints the format - “Person 1, enter your birthdate in the format of Month-Date-Year” and repeats for each player.

D. formatting -

print(“||”, person1Name, “||”, person1Bday, “||”)
print(“||”, person2Name, “||”, person2Bday, “||”)
print(“||”, person3Name, “||”, person3Bday, “||”)
print(“||”, person4Name, “||”, person4Bday, “||”)

E. Code

```
person1name = input("Person 1, please type in your name: ")
person2name = input("Person 2, please type in your name: ")
person3name = input("Person 3, please type in your name: ")
person4name = input("Person 4, please type in your name: ")

print("Your names have been documented!")

person1Bday = input("Person 1, please enter your birthdate in the format of Month-Date-Year: ")
person2Bday = input("Person 2, please enter your birthdate in the format of Month-Date-Year: ")
person3Bday = input("Person 3, please enter your birthdate in the format of Month-Date-Year: ")
person4Bday = input("Person 4, please enter your birthdate in the format of Month-Date-Year: ")

print("||", person1name, "|", person1Bday, "||")
print("||", person2name, "|", person2Bday, "||")
```

```
print("||", person3name, "|", person3Bday, "||")
print("||", person4name, "|", person4Bday, "||")
```

Output:

```
|| Chase Sims | March-21-2008 ||
|| Vraj | March-21-1981 ||
|| Jodhvir Singh | March-20-2008 ||
|| Rayyan Dulvi | November-06-2007 ||
```

Summary (½ page):

i.
The names used in the code were pretty similar. Both pairs had the same sets of variables, just different names. The functions of are variables where pretty much identical as well
ii.
Both teams had the same variable types (string) for the variable birthday. The first group had a format of mm-dd-yyyy while the second group had a format of Month-Day-Year. The first group has the better format because it tells the user how many digits each part needs.
iii.
Both pairs had a similar type of formatting when it came to the output, but specific details were different. For example, both groups separated the output of the player name and their birthday using a "|", but group 1 used double lines on the outside of both the player name and birthdate while group 2 did not. Also, group 2's way of formatting the birthday was done through (mm-dd-yyyy) while group 1 did it through (Month-Date-Year) with the difference being what part of the birthdate being only numbers or having it spelled out.

iv. The instructions asked for the users were very clear in the sense that what was being asked was directly being outputted.
